Buttons - Marketing

Buttons help users take an action. They initiate a process, commit a change, and complete steps in

Primary buttons

Primary buttons are used to represent the primary call to action on a screen. There are three primary button styles that solve for placement on either a dark or a light background.

> There can only be one primary action on a screen.

If there's more than one distinct option, the primary treatment should be used for the most likely or desired action.

Lorem ipsum Lorem ipsum

Secondary buttons

Secondary buttons are used for actions that require less focus than primary buttons. There are two secondary buttons styles that solve for placement on a dark or a light background.

> Pair with a primary action to convey a less-important or lessencouraged course of action than the primary.

Use for stand-alone actions that are unrelated to the primary action on the page.

Use for actions that are either optional or just less important/encouraged than the primary.
